

Confidor[®] Hose-On Lawn

INSECTICIDE

Active Constituent: 15 g/L IMIDACLOPRID

Controls curl grubs and billbug larvae in domestic lawns

Confidor Hose-on Lawn Insecticide controls curl grubs and billbug larvae through both contact and systemic action. These pests cause extensive damage to lawns by feeding on grass roots and stems. Affected grass turns yellow then brown and dies, and can be lifted and rolled back like a carpet.

HOW TO PREPARE AND APPLY

1. Shake well before applying.
2. Connect hose to hose-on applicator. You will need to have a click-on hose.
3. Turn the 'Off/On' dial on the applicator to 'Off'.
4. Pierce the two air holes in the top of the applicator with the attached stopper/tool and move stopper to the side.
5. Turn on the tap using moderate to high water pressure.
6. Extend hose to the farthest area to be treated and work back towards the tap to avoid walking over wet, treated grass.
7. When ready to treat, turn the dial to 'On'. Water mixes automatically with concentrate in the proper ratio.
8. Walk and spray lawn at a steady pace whilst sweeping the spray in a back and forth arc. Overlap treated areas slightly.
9. Re-insert stopper plug on completion.

CAUTION

DO NOT allow chemical containers or spray to get into drains, sewers, streams or ponds. DO NOT spray if bees are feeding on flowering plants. Will kill bees. DO NOT feed lawn clippings to poultry or livestock. Children and pets may re-enter the treated area after the spray has dried.

STORAGE AND DISPOSAL

Keep out of the reach of children. Store in the closed, original container in a cool, dry place. Do not store in direct sunlight. Dispose of empty container by wrapping in paper, placing in plastic bag and putting in garbage.

LIABILITY

This product must be used strictly as directed. Bayer CropScience Pty Ltd may not be liable for loss or damage arising from failure to follow directions for use.

HOW TO USE

Measure lawn area before application. Apply Confidor Hose-on and water in thoroughly. Do not mow treated lawn for three days. Rain after spraying enhances control of the pests.

SITUATION	PESTS CONTROLLED	RATE *	WHEN TO APPLY
Lawns	Curl grubs* and billbug larvae (* also known as African black beetle larvae, Argentinian scarab beetle larvae or pruinose scarab larvae)	Apply the contents of this 500 mL bottle over 150 square metres	For curl grubs, the optimum application time is peak egg hatch which occurs between mid-spring to mid-summer. For billbug larvae, the optimum application time is at the peak of adult bug activity, or when small (4 mm) larvae are found in the thatch or surface soil. This occurs between late spring and early summer.
